BHE-3000M

**DESCRIPTION: -**

Brinell hardness with huge test force, the indentation is large, which adapts to test the big size grain metal, reflecting the combination property. Cast iron, steel, ferrous metal especially for rather soft metal, such as pure aluminium, lead, tin etc.

MAIN FUNCTIONS AND FEATURES: -

- Equipped with sophisticated sensors and a microcomputer control system, dynamic force value fluctuation is less than 1/1000, test results are more accurate.
- It possesses the 10 grades test force, it can test 10 Brinell scales, with wider test range.
- Equipped with high performance of servo motor which automatically load/unloading, it cause the less noise when do test.
- The outer shell of machine is formed of special founding one-time casted technique, stable structure, it is not easy to be out of shape, can work under relatively harsh environment.
- With pure white car painting and its class is high, have scratch resistance ability, it's still brightness used for years.
- This machine can connect to portable Brinell image software, improving the efficiency.
