HVS-A MICRO / VICKERS HARDNESS MEASUREMENT SOFTWARE (Optional)

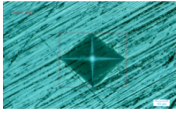

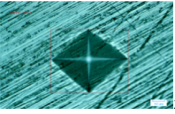

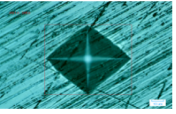

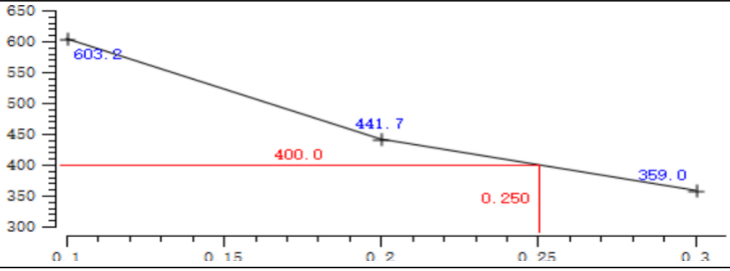

MAIN FUNCTIONS:

- **Auto hardness measurement:** With a click of a button, the software automatically measures the diagonals of the indentation, calculates the hardness value and the statistics.
- **Hardness curve:** With the depths of test points by user input, the software automatically plots the hardness curve(s); User may save and load the depths in a depth template file for later testing for convenience.
- **Conversion, compensation, and validation:** Converts HV to other hardness scales ; Validates the test results with sample dimensions; Compensates the test results with respect to sample cylindrical/spherical diameters.
- **Statistics:** Automatically updates the statistical values such as average, min and max, standard deviation, Cp and Cpk.
- **FRACTURE TOUGHNESS TESTING,** Kc(kic) value can be measured as a standard function.
- **Auto-alarm:** Automatically marks the out of spec measurements.
- **Test report:** Automatically generates WORD or EXCEL report with customizable template.
- **Data archiving:** Measurement data and images can be saved in one file for later retrieval.
- **Knoop Scale:** Can be configured for Knoop Scale measurement.
- **Other Functions:** Includes the basic functions of imaging system such as image capture, camera calibration, image processing, geometric measurement, document labeling, album management, and printing with specified magnifications.
